

Appendix B

Average Water Withdrawals by County

The following one-page summaries of water-use information by county present withdrawals by water-use category, public supplier, and major North American Industry Classification System (NAICS) groups, a pie chart of the distribution of total withdrawals by water-use category, and a map that shows the location of the county within the State. See the first example on the following county page for Autauga. Also listed are totals for population and population served by public supply. In each of the county summaries, a table lists average daily withdrawals for the categories of use. The withdrawals are totaled by source of water used (surface water [SW] or groundwater [GW]) by category, and the percentage of use is indicated. Each public supplier is listed by the county in which the withdrawal occurs; therefore, a public supplier may be listed in more than one county depending on the location of its water sources. For example, Birmingham Water Works Board withdraws surface water from Blount, Cullman, Jefferson, and Walker Counties, and is therefore listed on each of the corresponding county pages. Abbreviations were made to allow for system names to fit in the space provided and are shown for public supply in Table B-1.

In the tables for category, public supplier, and NAICS groupings, a value of 0.00 MGD was used if the withdrawal was less than 0.01 MGD. As a result, some totaled withdrawals from these tables may be less than the totals shown for public supply or industry in the water use-category table. Numbers may not sum to total withdrawals because of rounding. “Residential” refers to self-supplied residential withdrawals. A table of withdrawals by NAICS code lists withdrawals by groundwater (GW) or surface water (SW). The NAICS groupings include the water-use categories of commercial, industrial, and thermoelectric power. Abbreviations were made to allow for system names to fit in the space provided and are shown for the NAICS codes in Table B-2.

Estimated 2015 Water Use and
Surface Water Availability in Alabama

Table B-1. Public supply abbreviations.

Name	Abbreviation
