

Appendix C

Average Water Withdrawals by Subbasin

The following one-page summaries of water-use information by subbasin present withdrawals by water-use category, public supplier, and major North American Industry Classification System (NAICS) groups, a pie chart of the distribution of total withdrawals by water-use category, and a map that shows the location of the county within the State. See the first example on the following subbasin page for 03130002 – Middle Chattahoochee-Lake Harding. Also listed is the area, estimated population, and the subregion associated with the subbasin. In each of the subbasin summaries, a table lists average daily withdrawals for the categories of use. The withdrawals are totaled by source of water used (surface water [SW] or groundwater [GW]) by category, and the percentage of use is indicated. Each public supplier is listed by the subbasin in which the withdrawal occurs. Therefore, a public supplier may be listed in more than one subbasin depending on the location of its water sources. For example, Birmingham Water Works Board withdraws water from the Upper Coosa (03150105), Mulberry (03160109), Sipsey Fork (03160110), and Locust (03160111) subbasins and is, therefore, listed on each of the corresponding subbasin pages. Information is also provided for withdrawals as classified under the North American Industry Classification System (NAICS) In the tables, public suppliers, categories, and major NAICS groups were listed as withdrawing 0.00 MGD if the withdrawal was less than 0.01 MGD. As a result, some totaled withdrawals from these tables may be less than the totals for public supply or industry in the water-use-category table. Numbers may not sum to total withdrawals because of rounding. No site-specific water withdrawals were reported for the Upper Chickasawhay (0317002, land area 65.1 square miles), Lower Chickasawhay (0317003, land area 0.7 square mile), or Upper Elk (0603003, land area 0.4 square mile) subbasins, and no water-withdrawal estimates were determined for the aquaculture, livestock, mining, or self-supplied residential categories because of the relatively small land areas of these subbasins. Major NAICS groups include the water-use categories of commercial, industrial, and thermoelectric power. Abbreviations were made to allow for system names to fit in the space provided and are shown for public supply in Table C-1 and NAICS codes in Table C-2.

Estimated 2015 Water Use and
Surface Water Availability in Alabama

Table C-1. Public supply abbreviations.

| Name | Abbreviation |
