

Public-Supplier Survey Form

Each of the public water suppliers was surveyed to determine the amount of water delivered to residential, commercial, and industrial customers and public use and losses. The public suppliers surveyed either withdrew their own water from a groundwater or surface-water source, or purchased water, or relied on a combination of sources that could include groundwater, surface water, or purchased water. Public suppliers differ as to how water is accounted for within the system, and the questions in the survey (figure F-1) cover the range of possible combinations of customer billing classes.
