

Attachment C

Does this project seek to leverage grant funds through private investment?

Charter has, and will continue, to invest private-risk capital to expand service to areas of the state that lack adequate service. But there are still some portions of Alabama where, due to the substantial cost required to build into these areas, to the best of Charter's knowledge, there is no broadband service provider and Charter has no plans to build in these areas.

Will this project be an extension of existing infrastructure?

Yes, Charter Communications currently has infrastructure adjacent to this project that will be able to be extended to serve this area.

Does this project serve locations with demonstrated community support?

Yes, please see attached for a letter from Senator Greg Reed.

Will this project serve the highest number of unserved homes, businesses, and community anchor points for the least cost?

Charter is not aware of any community anchor points in the proposed service area, but we are happy to work with each of the government and municipal leaders in these areas to ensure that we optimize future opportunities and plans. This project will encompass the highest number of unserved homes at the least cost.

Does this project emphasize the highest broadband speeds?

Any resident with Charter service area has the ability to purchase up to a GIG (940 Mbps download) of service and a minimum broadband speed of 200 mbps/10mbps. DOCSIS modems have allowed Charter to increase internet speeds across the footprint and the significant scalability of Charter's network will lead to further speed increases as demand necessitates.
