

Attachment C

Does this project seek to leverage grant funds through private investment?

Charter has, and will continue, to invest millions of dollars in private-risk capital to expand service to areas of the state that lack adequate service, there are still some portions of Alabama where, due to the substantial cost required to build into these areas, there is no broadband service provider and Charter has no plans to build in these areas in 2020 or beyond.

Will this project be an extension of existing infrastructure?

Yes, Charter Communications currently has infrastructure adjacent to this project that will be able to be extended to serve this area.

Does this project serve locations with demonstrated community support?

Yes, please see attached for letters from Representative Corley Ellis and Calera City Clerk Connie Payton.

Will this project serve the highest number of unserved homes, businesses, and community anchor points for the least cost?

Charter is not aware of any community anchor points in the proposed service area, but we are happy to work with each of the government and municipal leaders in these areas to ensure that we optimize future opportunities and plans. This project will encompass the highest number of unserved homes at the least cost.

Does this project emphasize the highest broadband speeds?

Any resident with Charter service area has the ability to purchase up to a gig of service and a minimum broadband speed of 200mbps/10mbps. DOCSIS 3.1 modems allowed Charter to increase internet speeds across the footprint and will lead to further speed increases up to 10 Gbps downstream and up to 1 Gbps upstream network capacity.
