Subject: Fiber Internet In Cold Springs Area

To whom it may concern,

I am writing expressing interest in getting fiber internet at 1935 county road 109. Currently we have no internet options other than fixed wireless or LTE services. We currently have service through Sardistel, but the speed is not the greatest. My fiance is currently in the process of starting a small business for which she uses the internet for. Lately the speeds get cut so much with just one computer using the internet, that it renders any other applications useless. I also occasionally work from home and we typically have to "take turns" using our current internet. There is currently, and never has been, another source of internet for our area except the two stated above. We will be getting married this year, and hopefully kids will come soon. I can't imagine what a struggle it will be if another pandemic hits without a solid source of high speed internet.

To my knowledge we live on a stretch of 109 that only has those 2 options of internet available, but other options are available on each side of us within 1/4 mile. My uncle has two businesses next door to us also. I think he uses a hotspot for his internet services. Our little community is also filled with multiple lake homes that could also use it. Any help would be greatly appreciated.

Thank you,
Nathan Lamar
