

A.4 Update

The addresses in this project are currently unserved by any fixed broadband provider offering service of 25 Mbps download, 3 Mbps upload. While it does not meet the map criteria, ADECA has pre-approved Mediacom Communications to show documentation that these addresses are unserved. Currently, the only fixed broadband provider in the area is AT&T. When these are searched by AT&T serviceability, these addresses are clearly shown as unserviceable. If more examples are needed, they can be provided.

The image shows two screenshots of the AT&T website's serviceability checker. Both screenshots show the 'TV your way' header and the 'Your address' field. The first screenshot is for the address 10577 LYTTLETON LOOP, LILLIAN, AL 36549. The second screenshot is for the address 10136 LEYLAND DR, LILLIAN, AL 36549. In both cases, the 'Internet' tab is selected, and a message states 'Internet isn't available' for the given address. The 'TV' tab is also visible, and a 'Remove' button is present next to it. A 'Chat live' button is located in the bottom right corner of each screenshot.
