

Appendix L

Monthly Flow Assessment Site Summaries

The summaries for each of the following 186 monthly flow assessment sites include four pages as follows:

First page – Observed and estimated monthly flows in a tabular format from January 1975 through December 2014.

Second page – Monthly and annual streamflow percentiles in a tabular format along with a graphical representation of non-exceedance values.

Third page – A graph of selected monthly streamflow characteristics for each site and each monthly average streamflow for that site divided into 10 equal increments. Above the graph, the drainage area for the site is listed. Under the graph is a tabular summary of selected monthly characteristics for the site.

Fourth page - A graph of the average monthly streamflow for the site as well as 10th percentile increments of the non-exceedance flows. Under the graph is the tabular summary of selected monthly characteristics for the site.

The monthly streamflows and percentiles are in units of cubic feet per second (CFS).

(CFS – cubic feet per second; DA – drainage area, in square miles; CFSM – cubic feet per second per square mile; Q5 – 5th non-exceedance flow percentile)
